The screenshot shows a software interface titled "Code Browser". On the left, there's a "Packages" tree view with nodes like "profile", "cognitive", "i18n", "taskmgmt", "kernel", "ocl", and "persistence". The "persistence" node is selected. Below it is a "util" folder. In the center, there are three tabs: "Classes", "Hierarchy", and "Methods". The "Classes" tab is active, showing a list of classes such as "ArgoParser", "SAXParserBase", "ArgoTokenTable", "XMLTokenTableBase", "XMLElement", "DiagramMemberFilePersister", "PGMLStackParser", "FigEdgeHandler", and "ModelMemberFilePersister". The "Methods" tab is also visible. At the bottom, there's a "Code" tab containing Java code for the "PGMLStackParser" class:

```
class PGMLStackParser
    extends org.tigris.gef.persistence.pgml.PGMLStackParser {

    private static final Logger LOG = Logger.getLogger(PGMLStackParser.class);

    private List<EdgeData> figEdges = new ArrayList<EdgeData>(50);

    private LinkedHashMap<FigEdge, Object> modelElementsByFigEdge =
        new LinkedHashMap<FigEdge, Object>(50);

    private DiagramSettings diagramSettings;
```

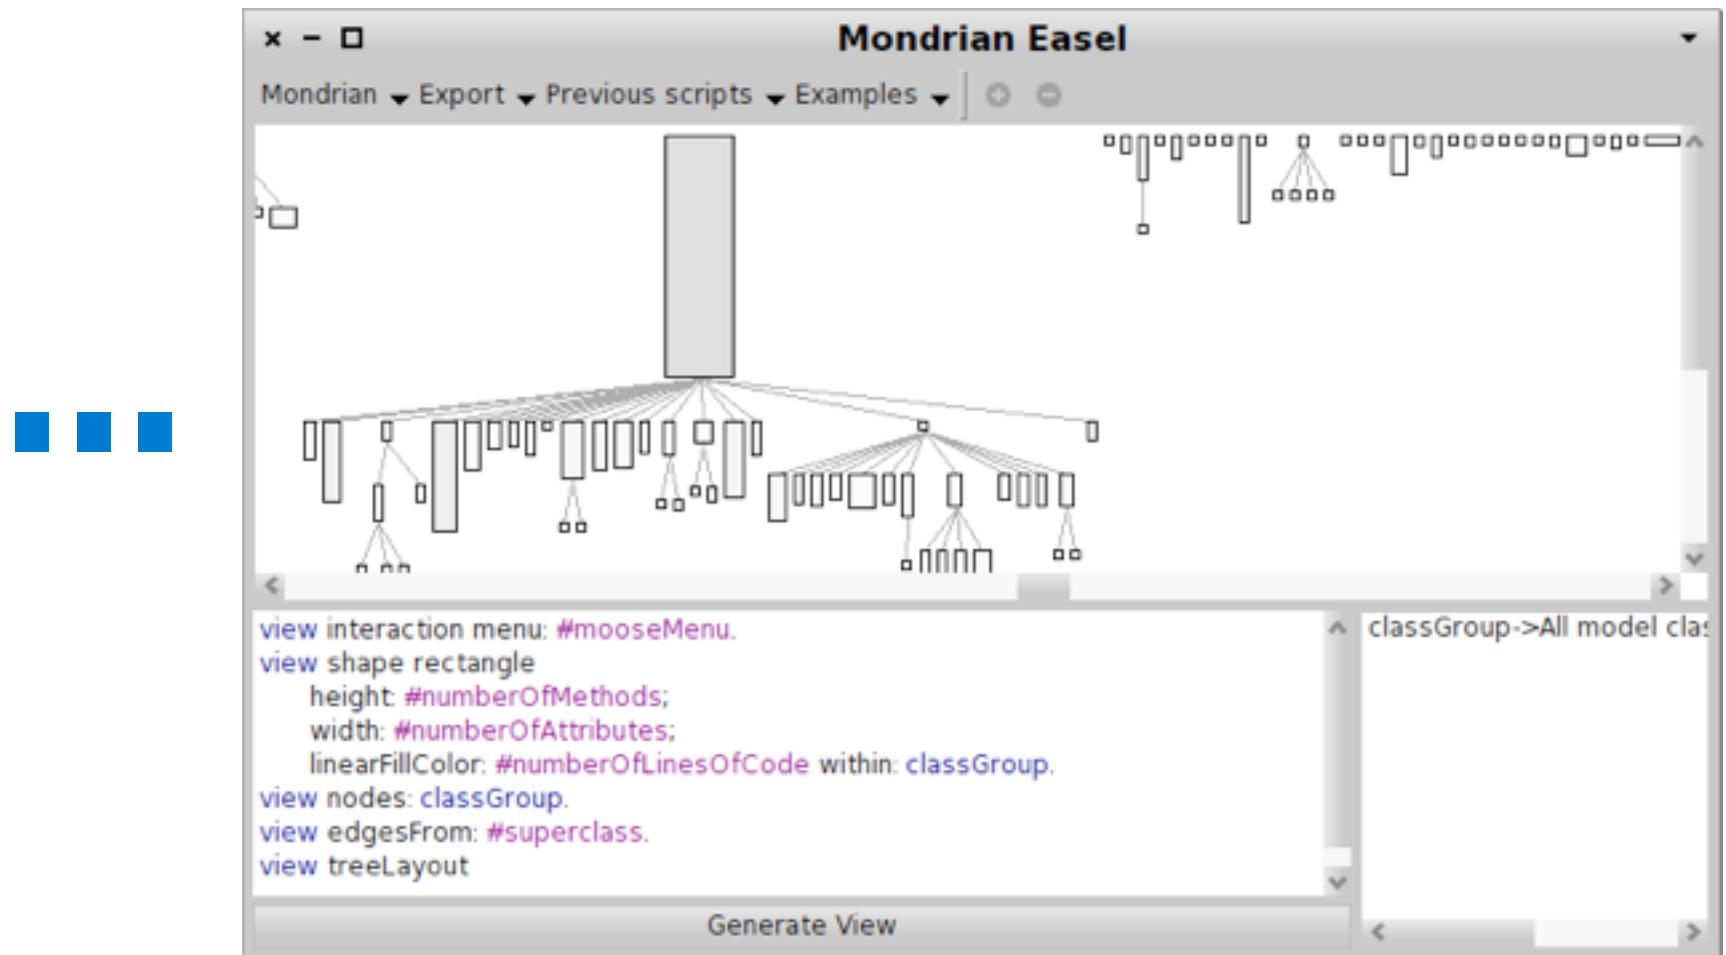

# Aggrégation de données / ponts entre outils

parseur combinateur  
modulaire

Exemple : corréler les bugs et la  
couverture de tests

# Analyses dédiées

# Outils spécifiques

The screenshot shows the Code Browser interface with the following sections:

- Packages:** profile, cognitive, i18n, taskmgmt, kernel, ocl, persistence (highlighted), util.
- Classes:** ArgoParser, SAXParserBase, ArgoTokenTable, XMLTokenTableBase, XMLElement, DiagramMemberFilePersister, PGMLStackParser (highlighted), FigEdgeHandler, ModelMemberFilePersister.
- Methods:** interpretStyle, attachEdges, addFigEdge, readDiagram, constructFig, getPortFig, getFigNode, PGMLStackParser, getDiagramSettings.
- Code:** Displays the source code for the PGMLStackParser class.

```
class PGMLStackParser
    extends org.tigris.gef.persistence.pgml.PGMLStackParser {

    private static final Logger LOG = Logger.getLogger(PGMLStackParser.class);

    private List<EdgeData> figEdges = new ArrayList<EdgeData>(50);

    private LinkedHashMap<FigEdge, Object> modelElementsByFigEdge =
        new LinkedHashMap<FigEdge, Object>(50);

    private DiagramSettings diagramSettings;
```

```
